

44-portfolio-branding

Modul 44: Digital Portfolio & Personal Branding

Figure 1: Banner Portfolio & Branding

Bangun personal branding digital yang kuat — dari portofolio website, profil GitHub, LinkedIn, hingga kontribusi komunitas.

Informasi Modul

Item	Detail
Tingkat	Mahir (Intermediate)
Durasi	16 Jam (4 sesi × 4 jam)
Prasyarat	Lulus modul dasar web (HTML, CSS, JavaScript), akun GitHub & LinkedIn aktif
Tools	VS Code, GitHub Pages, Vercel/Netlify, Shields.io, Canva/Figma (opsional)

Tujuan Pembelajaran

Setelah menyelesaikan modul ini, peserta mampu:

1. Membuat GitHub Profile README profesional dengan badge, pin repositori, dan dokumentasi proyek
2. Membangun dan mendeploy portfolio website responsif dengan studi kasus proyek
3. Mengoptimasi profil LinkedIn dan menyusun CV/Resume ATS-friendly
4. Menulis artikel teknis dan berkontribusi di komunitas open source

Materi Pembelajaran

Sesi	Topik	Durasi	Output
1	GitHub Profesional — Profile README, pinned repos, badge shields.io, dokumentasi proyek, GitHub Pages	4 jam	GitHub profile lengkap + project docs

Sesi	Topik	Durasi	Output
2	Portfolio Website — Hero, about, project cards, skills, contact form, case study pages, deploy Vercel/Netlify	4 jam	Portfolio website live
3	LinkedIn & Career — Optimasi profil, headline, about, featured projects, CV ATS, personal branding statement	4 jam	Profil LinkedIn optimal + CV siap pakai
4	Tech Community — Blog teknis (Dev.to/Hashnode), artikel problem-solution, open source PR, networking	4 jam	Artikel blog + PR open source

Output Akhir

Setelah menyelesaikan seluruh sesi, peserta menghasilkan:

- ☐ **Live Portfolio Website** — di-deploy ke Vercel/Netlify dengan domain kustom
- ☐ **GitHub Profile Profesional** — profile README, pinned repos, badges, GitHub Pages site
- ☐ **Profil LinkedIn Optimal** — headline, about, featured, skills endorsement
- ☐ **CV/Resume ATS-Friendly** — siap dikirim ke perekrut
- ☐ **Artikel Teknis Publik** — di Dev.to / Hashnode / Medium
- ☐ **Kontribusi Open Source** — minimal 1 commit/PR ke repositori publik

AI Prompt Exercises

Setiap sesi menyertakan latihan berbasis AI prompt. Gunakan prompt ini di ChatGPT, Claude, atau Gemini untuk mempercepat dan memperdalam pembelajaran:

Sesi	Prompt AI
1	<i>"Buatkan GitHub profile README untuk developer [spesialisasi] dengan badge skill, statistik GitHub, dan daftar pinned project. Sertakan animasi typing effect."</i>
2	<i>"Buatkan struktur HTML + CSS untuk portfolio website dengan hero section, project cards grid, skills progress bar, contact form, dan footer. Responsif mobile-first."</i>
3	<i>"Analisis CV saya berikut dan beri saran perbaikan format ATS, action verbs, dan achievement metrics. [Tempel CV]"</i>
4	<i>"Bantu saya outline artikel teknis tentang [topik] dengan format problem → solution → code demonstration → result. Sertakan hook pembuka yang kuat."</i>

Sesi 1: GitHub Profesional

Buat profil GitHub yang menonjol, dokumentasi proyek yang rapi, dan site GitHub Pages.

Durasi: 4 jam | **Output:** GitHub profile lengkap + project docs

1.1 GitHub Profile README

Buat repositori khusus dengan nama **username GitHub kamu** (contoh: `github.com/username/username`). Repositori ini spesial — kon-

ten README-nya muncul di halaman profil GitHub kamu.

Struktur Profile README

```
<!-- Header / Banner -->
<h1 align="center">Hi 👋, I'm Nama Kamu</h1>
<h3 align="center">Frontend Developer | React Enthusiast | Open Source Lover</h3>

<!-- Typing Animation -->
<p align="center">
  
  <a href="https://twitter.com/username">
  
  
</p>

<p align="center">
  
</p>

---

<!-- Pinned Projects -->
## 📁 Pinned Projects

### [Project 1](https://github.com/username/project1)
![[Repo Card]](https://github-readme-stats.vercel.app/api/pin/?username=username&repo=username/project1)

### [Project 2](https://github.com/username/project2)
![[Repo Card]](https://github-readme-stats.vercel.app/api/pin/?username=username&repo=username/project2)

---

<!-- Contribution Graph -->
## 📈 Contribution Graph

![[GitHub Activity Graph]](https://github-readme-activity-graph.vercel.app/graph?username=username)

---

<!-- Visitor Count -->
<p align="center">
  
</p>

```

1.2 Shields.io Badges

Gunakan [Shields.io](https://shields.io) untuk badge skill, sosial media, dan status proyek.

Format Badge Dasar

`https://img.shields.io/badge/LABEL-MESSAGE-COLOR?logo=logoname&logoColor=white`

Contoh Badge Populer

Badge	URL
React	<code>![React](https://img.shields.io/badge/React-61DAFB?logo=react&logoColor=black)</code>
JavaScript	<code>![JS](https://img.shields.io/badge/JavaScript-F7DF1E?logo=javascript&logoColor=black)</code>
TypeScript	<code>![TS](https://img.shields.io/badge/TypeScript-3178C6?logo=typescript&logoColor=white)</code>
Node.js	<code>![Node](https://img.shields.io/badge/Node.js-339933?logo=nodedotjs&logoColor=white)</code>
Python	<code>![Python](https://img.shields.io/badge/Python-3776AB?logo=python&logoColor=white)</code>
License	<code>![License](https://img.shields.io/badge/licens-MIT-blue)</code>
Build Status	<code>![Build](https://img.shields.io/badge/build-passing-brightgreen)</code>

Badge Dinamis (dari GitHub API)

`![GitHub stars](https://img.shields.io/github/stars/username/repo?style=social)`
`![GitHub forks](https://img.shields.io/github/forks/username/repo?style=social)`
`![GitHub last commit](https://img.shields.io/github/last-commit/username/repo)`

1.3 Dokumentasi Proyek (README Template)

Setiap repositori butuh README yang baik. Gunakan template ini:

`# Nama Proyek`

`![Banner](link-to-banner-image)`

`##  Deskripsi`

Jelaskan secara singkat: apa yang dibangun, kenapa, dan untuk siapa.

□ Fitur

- □ Fitur 1 – deskripsi singkat
- □ Fitur 2 – deskripsi singkat
- □ Fitur 3 – deskripsi singkat

□ Tech Stack

Teknologi	Kegunaan
-----	-----
React	Frontend framework
Tailwind CSS	Styling
Firebase	Backend & database
Vercel	Deployment

□ Screenshot

! [Screenshot](link-to-screenshot.png)

□ Link Demo

[Live Demo](https://your-app.vercel.app)

□ Cara Install

```
```bash
git clone https://github.com/username/repo.git
cd repo
npm install
npm run dev
```

## □ Lisensi

Distributed under the MIT License.

## ## 1.4 GitHub Pages Site

GitHub Pages hosting static site gratis dari repositori GitHub.

### ### Cara Setup

1. Buka repo → **\*\*Settings\*\*** → **\*\*Pages\*\***
2. Pilih branch (biasanya ``main`` atau ``gh-pages``)
3. Pilih folder root ``/`` atau ``/docs``
4. Klik **\*\*Save\*\***

5. Tunggu 1-2 menit – site live di `https://username.github.io/repo-name/`

### ### Untuk User/Organization Site

Buat repo bernama `username.github.io` → isi HTML/CSS/JS → langsung live di `https://`

### ### Struktur Folder GitHub Pages

. |— index.html |— css/ | |— style.css |— js/ | |— main.js |—  
assets/ | |— images/ |— README.md

### ### Contoh HTML untuk GitHub Pages

```
```html
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8" />
  <meta name="viewport" content="width=device-width, initial-
scale=1.0" />
  <title>My Portfolio</title>
  <link rel="stylesheet" href="css/style.css" />
</head>
<body>
  <header>
    <h1>Hello, I'm [Nama]</h1>
    <p>Frontend Developer</p>
    <a href="https://github.com/username">GitHub</a>
    <a href="https://linkedin.com/in/username">LinkedIn</a>
  </header>
  <main>
    <section id="projects">
      <h2>Projects</h2>
      <div class="project-card">
        <h3>Project 1</h3>
        <p>Deskripsi singkat project</p>
        <a href="https://github.com/username/project1">Repo</a>
        <a href="https://project1.vercel.app">Live</a>
      </div>
    </section>
  </main>
  <footer>
    <p>&copy; 2026 [Nama]</p>
  </footer>
</body>
```

</html>

Latihan

Latihan 1: Profile README Dasar

Buat repositori username/username (ganti dengan username GitHub kamu). Isi dengan README yang mencakup:

- Header dengan nama dan title
- Social links (minimal GitHub + LinkedIn)
- About Me section (3-5 bullet points)
- Tech stack badges (minimal 5 badge berbeda)
- Visitor counter

Kriteria: Repo terlihat di profil GitHub, semua link berfungsi.

Latihan 2: Statistik & Badge Dinamis

Tambahkan ke profile README:

- GitHub stats card (gunakan github-readme-stats)
- Streak stats (gunakan github-readme-streak-stats)
- Top languages card
- Contribution activity graph
- Badge dinamis untuk followers, repositori, stars

Kriteria: Semua card menampilkan data real dari akun GitHub kamu.

Latihan 3: Dokumentasi Proyek

Pilih salah satu proyek yang pernah kamu buat (atau buat proyek dummy). Buat README lengkap dengan:

- Nama & deskripsi proyek
- Fitur (minimal 3 bullet)
- Tech stack table
- Screenshot (bisa screenshot dummy)
- Link demo (bisa link ke GitHub Pages)
- Cara install & run
- License badge

Kriteria: README minimal 300 kata, ada table dan code block.

Latihan 4: GitHub Pages Site

Buat landing page pribadi menggunakan GitHub Pages:

1. Buat repo username.github.io
2. Buat index.html dengan:
 - Hero section (nama, title, tagline)
 - About section (foto/avatar, bio singkat)
 - Projects section (3 project cards)
 - Contact section (email, sosial media)
 - Footer
3. Styling dengan CSS (minimal 50 baris CSS)
4. Deploy ke GitHub Pages

Kriteria: Site live di <https://username.github.io>, responsif di mobile, semua link berfungsi.

Sesi 2: Portfolio Website

Bangun portfolio website responsif, lengkap dengan case study proyek, lalu deploy ke Vercel/Netlify.

Durasi: 4 jam | **Output:** Portfolio website live

2.1 Struktur Portfolio Website

Portfolio website profesional terdiri dari komponen berikut:

```
portfolio/
├── index.html
├── css/
│   └── style.css
├── js/
│   └── main.js
├── projects/
│   ├── project-1.html
│   ├── project-2.html
│   └── project-3.html
├── assets/
│   ├── images/
│   │   ├── hero-bg.jpg
│   │   ├── profile.jpg
│   │   └── project-1-screenshot.png
│   │   ...
│   └── resume.pdf
└── README.md
```

2.2 Komponen Portfolio

Hero Section

```
<!-- index.html -->
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8" />
  <meta name="viewport" content="width=device-width, initial-scale=1.0" />
  <title>Nama Kamu – Portfolio</title>
  <link rel="stylesheet" href="css/style.css" />
  <link rel="stylesheet" href="https://cdnjs.cloudflare.com/ajax/libs/font-aweso
</head>
<body>
  <!-- Navigation -->
  <nav class="navbar">
    <div class="container">
      <a href="#" class="logo">Nama<span>Kamu</span></a>
      <ul class="nav-links" id="navLinks">
        <li><a href="#hero">Home</a></li>
        <li><a href="#about">About</a></li>
        <li><a href="#projects">Projects</a></li>
        <li><a href="#skills">Skills</a></li>
        <li><a href="#contact">Contact</a></li>
      </ul>
      <div class="hamburger" id="hamburger">
        <span></span><span></span><span></span><span></span>
      </div>
    </div>
  </nav>

  <!-- Hero -->
  <section id="hero" class="hero">
    <div class="container">
      <div class="hero-content">
        <p class="hero-greeting">Hello, I'm</p>
        <h1 class="hero-name">Nama Kamu</h1>
        <h2 class="hero-title">Frontend Developer</h2>
        <p class="hero-description">
          Saya membangun aplikasi web modern dengan React, TypeScript, dan Tailw
          Fokus pada performa, aksesibilitas, dan user experience.
        </p>
        <div class="hero-cta">
          <a href="#projects" class="btn btn-primary">Lihat Project</a>
          <a href="#contact" class="btn btn-secondary">Hubungi Saya</a>
        </div>
      </div>
    </div>
  </section>
</body>
</html>
```

```

    </div>
    <div class="hero-social">
      <a href="https://github.com/username"><i class="fab fa-github"></i></a>
      <a href="https://linkedin.com/in/username"><i class="fab fa-linkedin-i
      <a href="https://twitter.com/username"><i class="fab fa-twitter"></i></a>
      <a href="https://dev.to/username"><i class="fab fa-dev"></i></a>
    </div>
  </div>
  <div class="hero-image">
    
  </div>
</div>
</section>

```

CSS Styling

```

/* css/style.css */
* {
  margin: 0;
  padding: 0;
  box-sizing: border-box;
}

:root {
  --primary: #6c63ff;
  --primary-dark: #5a52d5;
  --secondary: #ff6584;
  --dark: #1a1a2e;
  --gray: #6b7280;
  --light: #f3f4f6;
  --white: #ffffff;
  --transition: all 0.3s ease;
}

body {
  font-family: 'Segoe UI', Tahoma, Geneva, Verdana, sans-serif;
  line-height: 1.6;
  color: var(--dark);
}

.container {
  max-width: 1200px;
  margin: 0 auto;
  padding: 0 2rem;
}

```

```

/* Navigation */
.navbar {
  position: fixed;
  top: 0;
  width: 100%;
  background: rgba(255, 255, 255, 0.95);

        width: 100%;
        background: var(--white);
        flex-direction: column;
        padding: 2rem;
        box-shadow: 0 2px 10px rgba(0, 0, 0, 0.1);
    }

    .nav-links.active {
        display: flex;
    }

    .hamburger {
        display: flex;
    }

    .hero .container {
        flex-direction: column-reverse;
        text-align: center;
    }

    .hero-name {
        font-size: 2.5rem;
    }

    .hero-description {
        margin: 0 auto 2rem;
    }

    .hero-cta {
        justify-content: center;
    }

    .hero-social {
        justify-content: center;
    }
}

```

```

.hero-image img {
  width: 250px;
  height: 250px;
}

.about-content {
  flex-direction: column;
  text-align: center;
}

.contact-container {
  flex-direction: column;
}

```

JavaScript (Mobile Menu, Smooth Scroll, Animasi)

// js/main.js

// Mobile Menu Toggle

```

const hamburger = document.getElementById('hamburger');
const navLinks = document.getElementById('navLinks');

```

```

hamburger.addEventListener('click', () => {
  navLinks.classList.toggle('active');
  hamburger.classList.toggle('active');
});

```

// Close menu on link click

```

document.querySelectorAll('.nav-links a').forEach(link => {
  link.addEventListener('click', () => {
    navLinks.classList.remove('active');
  });
});

```

// Smooth Scroll

```

document.querySelectorAll('a[href^="#"]').forEach(anchor => {
  anchor.addEventListener('click', function(e) {
    e.preventDefault();
    const target = document.querySelector(this.getAttribute('href'));
    if (target) {
      target.scrollIntoView({ behavior: 'smooth', block: 'start' });
    }
  });
});

```

```

});

// Navbar Background on Scroll
window.addEventListener('scroll', () => {
  const navbar = document.querySelector('.navbar');
  if (window.scrollY > 50) {
    navbar.style.boxShadow = '0 2px 20px rgba(0, 0, 0, 0.1)';
  } else {
    navbar.style.boxShadow = '0 2px 10px rgba(0, 0, 0, 0.1)';
  }
});

// Skill Bar Animation on Scroll
const skillBars = document.querySelectorAll('.skill-progress');

const animateSkills = () => {
  skillBars.forEach(bar => {
    const width = bar.getAttribute('data-progress') || bar.style.width;
    if (width) {
      bar.style.width = '0%';
      setTimeout(() => {
        bar.style.width = width;
      }, 200);
    }
  });
};

// Intersection Observer for Animations
const observer = new IntersectionObserver((entries) => {
  entries.forEach(entry => {
    if (entry.isIntersecting) {
      if (entry.target.classList.contains('project-card')) {
        entry.target.style.opacity = '1';
        entry.target.style.transform = 'translateY(0)';
      }
      if (entry.target.id === 'skills') {
        animateSkills();
      }
    }
  });
}, { threshold: 0.1 });

// Observe elements
document.querySelectorAll('.project-card').forEach(card => {
  card.style.opacity = '0';
  card.style.transform = 'translateY(20px)';
});

```

```

    card.style.transition = 'all 0.5s ease';
    observer.observe(card);
  });

  observer.observe(document.querySelector('#skills'));

```

2.3 Tech Stack Badges untuk Portfolio

Gunakan baris berikut di bagian About atau Skills:

```

<div class="tech-stack">
  
  
  
  
  
  
</div>

```

2.4 Project Case Study Pages

Buat halaman detail untuk setiap proyek — format ini mirip case study portfolio profesional.

Template Case Study

```

<!-- projects/project-1.html -->
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8" />
  <meta name="viewport" content="width=device-width, initial-scale=1.0" />
  <title>Project Name – Case Study</title>
  <link rel="stylesheet" href="../css/style.css" />
  <link rel="stylesheet" href="https://cdnjs.cloudflare.com/ajax/libs/font-awesome/5.15.1/css/all.min.css" />
  <style>
    .case-study {
      padding: 8rem 0 4rem;
      max-width: 800px;
      margin: 0 auto;
    }
    .case-study h1 { font-size: 2.5rem; margin-bottom: 1rem; }
    .case-study h2 { font-size: 1.8rem; margin: 2rem 0 1rem; }
    .case-study p { color: var(--gray); margin-bottom: 1rem; line-height: 1.8; }
    .case-study img { width: 100%; border-radius: 10px; margin: 1.5rem 0; box-shadow: 0 10px 20px #000000; }
  </style>

```

```

.case-study .meta { display: flex; gap: 1rem; margin-bottom: 2rem; flex-wrap
.case-study .meta a { padding: 0.5rem 1.5rem; border-radius: 50px; text-deco
.case-study .meta .live { background: var(--primary); color: white; }
.case-study .meta .repo { background: var(--dark); color: white; }
.case-study ul { padding-left: 1.5rem; margin-bottom: 1rem; }
.case-study ul li { color: var(--gray); margin-bottom: 0.5rem; }
.tech-badge { display: inline-block; padding: 0.3rem 0.8rem; background: #e8
</style>
</head>
<body>
  <!-- Navbar (sama seperti index.html) -->
  <nav class="navbar">
    <div class="container">
      <a href=" ../index.html" class="logo">Nama<span>Kamu</span></a>
      <ul class="nav-links">
        <li><a href=" ../index.html#hero">Home</a></li>
        <li><a href=" ../index.html#projects">Projects</a></li>
        <li><a href=" ../index.html#contact">Contact</a></li>
      </ul>
    </div>
  </nav>

  <!-- Case Study Content -->
  <div class="container">
    <article class="case-study">
      <h1>Nama Proyek</h1>

      <div class="meta">
        <a href="https://project-demo.vercel.app" class="live" target="_blank"><
        <a href="https://github.com/username/project" class="repo" target="_blan
      </div>

      □ Latar Belakang</h2>
      <p>
        Jelaskan masalah yang ingin diselesaikan. Ceritakan konteksnya – kenapa
        siapa target user, apa pain point yang dijawab.
      </p>

      <h2>□ Tujuan</h2>
      <p>
        Apa goals dari proyek ini? Misal: mengurangi waktu loading, meningkatkan
        mengotomatisasi workflow tertentu.
      </p>

```

```

<h2>❖ Solusi</h2>
<p>
  Jelaskan pendekatan teknis yang dipakai. Arsitektur, stack pilihan, alasan memilih teknologi tertentu.
</p>

<h2>☐ Tech Stack</h2>
<div>
  <span class="tech-badge">React</span>
  <span class="tech-badge">TypeScript</span>
  <span class="tech-badge">Tailwind CSS</span>
  <span class="tech-badge">Firebase</span>
  <span class="tech-badge">Vercel</span>
</div>

<h2>☐ Screenshot & Demo</h2>

<p>Deskripsi fitur 1.</p>

<p>Deskripsi fitur 2.</p>

<h2>☐ Hasil & Dampak</h2>
<ul>
  <li>☐ Waktu loading turun 40% setelah optimasi</li>
  <li>☐ 500+ pengguna aktif dalam 2 bulan pertama</li>
  <li>☐ 95% Lighthouse performance score</li>
</ul>

<h2>☐ Pelajaran</h2>
<p>
  Refleksi – apa yang dipelajari, tantangan terbesar, apa yang akan dilakukan jika mengulang dari awal.
</p>

<h2>☐ Links</h2>
<ul>
  <li>Live: <a href="https://project-demo.vercel.app">https://project-demo</a>

</footer>

```

```
</body>
</html>
```

2.5 Deployment ke Vercel / Netlify

Vercel (Recommended)

1. Push kode ke GitHub
2. Buka vercel.com → Login with GitHub
3. Klik **Add New → Project**
4. Pilih repo portfolio kamu
5. Settings defaults — langsung **Deploy**
6. Selesai! URL: <https://portfolio-xyz.vercel.app>

Netlify

1. Push kode ke GitHub
2. Buka netlify.com → Login with GitHub
3. Klik **Add new site → Import an existing project**
4. Pilih repo → **Deploy site**
5. Selesai! URL: <https://random-name.netlify.app>

Custom Domain

1. Beli domain di Niagahoster / Namecheap / Cloudflare
 2. Di dashboard Vercel/Netlify:
 - Vercel: Project → Settings → Domains → add domain
 - Netlify: Site settings → Domain management → add custom domain
 3. Update nameservers/ DNS records sesuai petunjuk
 4. Tunggu propagasi DNS (5 menit - 24 jam)
-

Latihan

Latihan 1: Hero + About Section

Buat halaman portfolio dengan:

- Navbar sticky dengan link navigasi
- Hero section: nama, title, deskripsi, CTA buttons, sosial media links
- About section: bio singkat, stat cards (pengalaman, proyek, sertifikasi)
- Styling responsive mobile-first

Kriteria: Layout menggunakan flexbox/grid, mobile responsive, navbar transparan di atas lalu solid saat scroll.

Latihan 2: Project Cards + Skills

Tambahkan ke portfolio:

- Projects section dengan grid 3 project cards
- Masing-masing card: gambar, judul, deskripsi, tech tags, link repo + live
- Skills section dengan progress bar animasi
- Minimal 2 kategori skill (Frontend, Backend, Tools, dll)

Kriteria: Project cards ada hover effect (scale/translate), skill bar animasi muncul saat discroll.

Latihan 3: Contact Form + Case Study Page

Buat:

- Contact form dengan nama, email, subjek, pesan
- Style form yang konsisten dengan tema portfolio
- Footer dengan copyright
- Minimal 1 halaman case study proyek lengkap (problem → solusi → hasil → link)

Kriteria: Form input ada focus state styling, case study page memiliki semua section (latar belakang, tujuan, solusi, tech stack, hasil, pelajaran).

Latihan 4: Deploy Portfolio + Custom Domain

- Push portfolio ke GitHub repo
- Deploy ke Vercel atau Netlify
- (Opsional) Hubungkan custom domain
- Kirim link portfolio yang sudah live

Kriteria: Portfolio live dan bisa diakses publik, semua link (navigasi, sosial media, project, contact) berfungsi, layout responsif di mobile & desktop.

Sesi 3: LinkedIn & Career

Optimasi profil LinkedIn dan CV untuk menarik perekrut, plus bangun personal branding statement yang kuat.

Durasi: 4 jam | **Output:** Profil LinkedIn optimal + CV siap pakai

3.1 LinkedIn Profile Optimization

Profil LinkedIn yang optimal meningkatkan visibilitas di pencarian perekrut hingga 40x.

Headline

Headline muncul di bawah nama — ini elemen pertama dilihat perekrut.

Format optimal:

[Jabatan] | [Spesialisasi] | [Skill Utama] | [Value Proposition]

Contoh:

❑ Kurang Baik	❑ Optimal
Frontend Developer at PT Maju Mahasiswa Looking for job	Frontend Developer Computer Science Student Frontend Developer

About Section (2-3 paragraf)

Template Paragraf 1 — Hook: > “Frontend Developer with [angka] years of experience building [jenis aplikasi] using [teknologi utama]. Passionate about creating [value] through [pendekatan teknis].”

Template Paragraf 2 — Bukti: > “At [perusahaan/proyek], I [action verb] [what you did], resulting in [angka hasil]. Previously at [previous role/project], I [achievement lain].”

Template Paragraf 3 — CTA: > “Currently exploring opportunities in [bidang/industri]. Open to [jenis kolaborasi]. Let’s connect if you’re interested in [topik]!”

Featured Section

Gunakan fitur **Featured** untuk menampilkan:

1. **Portfolio website** — tambahkan link ke live site
2. **GitHub profile** — tambahkan link GitHub
3. **Artikel atau project** — tambahkan post/case study
4. **Sertifikasi** — screenshots sertifikat

Cara: Buka profil → Klik **Add a featured section** → Pilih Media / Links / Posts

Skills & Endorsement

Strategi skills endorsement:

- **Pilih 5-10 skill utama** yang relevan dengan target karir
- Susun urutan skill — skill paling kuat di atas
- **Minta endorsement** dari teman, rekan kerja, dosen
- Ambil **LinkedIn Skill Assessment** untuk dapat badge “Skill Verified”

Skill Wajib Developer: | Kategori | Skill | |-----|-----| | Bahasa | JavaScript, TypeScript, Python, Go | | Frontend | React, Next.js, Vue, Tailwind CSS | | Backend | Node.js, Express, Django, PostgreSQL | | Tools | Git, Docker, CI/CD, AWS, Figma | | Soft Skills | Problem Solving, Team Collaboration, Communication |

Experience Section

Format bullet untuk job/project experience:

[Action Verb] + [What you did] + [How you did it] + [Result/Impact]

Contoh: - Developed responsive web dashboard using React and TypeScript, reducing page load time by 35% - Led migration from REST to GraphQL API, improving data fetching efficiency by 50% across 10+ endpoints - Collaborated with 5 cross-functional team members to ship 3 major features in Q1 2026

Action Verbs (dari ATS-friendly)

Kategori	Verbs
Leadership	Led, Directed, Spearheaded, Coordinated, Managed
Development	Built, Developed, Engineered, Architected, Implemented
Analysis	Analyzed, Evaluated, Assessed, Optimized, Audited
Design	Designed, Created, Architected, Structured, Formulated
Improvement	Improved, Enhanced, Streamlined, Transformed, Refactored

Connection Strategy

- **Target 500+ connections** — threshold LinkedIn “All-Star” profile
 - Kirim **personalized connection request**
 - Contoh: *“Hi [name], Saya melihat background kamu di [bidang]. Saya juga tertarik di [topik]. Would love to connect and follow your journey!”*
 - **Engage** — like, comment, share post minimal 3x seminggu
-

3.2 ATS-Friendly CV / Resume

ATS (Applicant Tracking System) adalah software yang membaca CV secara otomatis. 75% CV ditolak ATS sebelum dilihat manusia.

Format ATS Checklist

Aturan	□ Lakukan	□ Jangan
Font	Arial, Calibri, Roboto (10-12pt)	Script, decorative, gambar font
File	PDF (save as standard PDF)	JPG, PNG, Canva export (images)
Structure	Single column, clear headings	Multi-column, tables, text boxes
Section	Standard: Summary → Experience → Education → Skills	Creative layouts, icons as bullets
Keywords	Match job description keywords	Generic skills without context
Header	Nama + phone + email + LinkedIn + GitHub	Foto, alamat lengkap, tanggal lahir

Template CV ATS-Friendly

[NAMA LENGKAP]
[Phone] | [Email] | linkedin.com/in/[username] | github.com/[username]
[Portfolio URL]

PROFESSIONAL SUMMARY

[2-3 kalimat: role + experience + key skills + target]

EXPERIENCE

[Job Title] | [Company] | [Location]
[Month Year] – [Month Year]

- [Action verb] [task] using [tools], resulting in [metric]
- [Action verb] [task] using [tools], resulting in [metric]
- [Action verb] [task] using [tools], resulting in [metric]

[Previous Job Title] | [Company] | [Location]
[Month Year] – [Month Year]

- [Same format – action, tool, result]
- ...

EDUCATION

[Degree] in [Major] | [University]
[Year] – [Year]
- GPA: [value] (optional)
- Relevant coursework: [list]

PROJECTS

[Project Name] – [Tech Stack]
- Brief description + impact
- Link: github.com/username/project

SKILLS

Languages: JavaScript, TypeScript, Python
Frameworks: React, Next.js, Node.js, Express
Tools: Git, Docker, AWS, PostgreSQL, Figma

CERTIFICATIONS

- [Cert Name] | [Issuer] | [Year]
- [Cert Name] | [Issuer] | [Year]

Achievement with Numbers

Ganti deskripsi tugas biasa dengan achievement yang terukur:

□ Tugas Biasa	□ Achievement Terukur
Developed website using React	Built React dashboard with 15+ components, serving 1,000+ daily users

□ Tugas Biasa	□ Achievement Terukur
Fixed bugs in codebase	Identified and resolved 40+ production bugs, improving app stability by 30%
Worked on team projects	Collaborated in 5-person agile team to deliver 3 sprints on time
Wrote unit tests	Achieved 85% code coverage with 200+ unit tests using Jest
Improved performance	Optimized API queries reducing response time from 2.3s to 0.4s (82% faster)

One-Page Rule

CV maksimal **1 halaman** untuk < 10 tahun pengalaman. Cara ringkas:

- Hanya 5-7 bullet terbaik per role
- Hilangkan deskripsi tugas yang obvious
- Gabungkan proyek kecil jadi satu section
- Gunakan angka untuk highlight impact

3.3 Personal Branding Statement

Personal branding statement adalah satu kalimat yang menjelaskan: siapa kamu, apa yang kamu lakukan, dan kenapa itu penting.

Formula

I help [target audience] [achieve outcome] through [your expertise/method].

Contoh: - "I help startups build fast, accessible web applications using React and TypeScript." - "I help businesses turn complex data into actionable insights with clean dashboards." - "I help junior developers transition into tech through structured mentoring and real-world projects."

Untuk LinkedIn Headline

[Role] | [Skill 1] + [Skill 2] | [Impact Statement]

Contoh: - "Frontend Developer | React + TypeScript | Building performant web apps" - "Software Engineer | Node.js + PostgreSQL | Scaling

backend systems” - “UI/UX Developer | Figma → React | Designing & building user-centric interfaces”

Untuk CV Summary

[Role] with [X years] experience in [field]. Specialized in [skill 1], [skill 2], and [skill 3]. Proven track record of [achievement type], including [specific result]. Seeking to leverage [strength] at [target company type].

Contoh: > “Frontend Developer with 3+ years experience in building web applications. Specialized in React, TypeScript, and Tailwind CSS. Proven track record of improving user experience and performance, including reducing page load time by 40% and increasing user engagement by 25%. Seeking to leverage modern frontend expertise at a fast-growing SaaS company.”

3.4 LinkedIn Profile Checklist

Gunakan checklist sebelum dianggap selesai:

- ☐ **Profile photo** profesional (bukan selfie, bukan liburan)
 - ☐ **Background banner** relevan (tech theme, personal brand)
 - ☐ **Headline** mengandung keyword pencarian role target
 - ☐ **About section** 3 paragraf (hook, bukti, CTA)
 - ☐ **Featured** — minimal 2 item (portfolio, GitHub, artikel)
 - ☐ **Experience** — semua bullet pakai action verb + angka
 - ☐ **Education** — diisi lengkap
 - ☐ **Skills** — minimal 5 skill,urut sesuai prioritas
 - ☐ **Licenses & Certifications** — diisi jika ada
 - ☐ **URL** — custom LinkedIn URL (linkedin.com/in/namakamu)
 - ☐ **Open to Work** — aktif (bisa visible ke semua atau hanya recruiters)
-

Latihan

Latihan 1: Optimasi Headline & About

Buka profil LinkedIn kamu (atau buat draft).

1. Tulis **headline** baru menggunakan format: [Role] | [Skill 1] + [Skill 2] | [Value Proposition]
2. Tulis **About section** 3 paragraf:
 - Paragraf 1: Hook — siapa kamu dan apa yang kamu lakukan
 - Paragraf 2: Bukti — pencapaian dengan angka

- Paragraf 3: CTA — apa yang kamu cari
3. Kirim ke teman/dosen untuk feedback

Kriteria: Headline mengandung keyword yang bisa dicari perekrut, about section maksimal 300 kata.

Latihan 2: Rewrite Experience Bullets

Ambil 3 pengalaman (kerja/ magang/ organisasi/ proyek kampus) kamu.

Untuk setiap pengalaman, tulis ulang bullet points menggunakan format:

[Action Verb] + [What] + [Tools] + [Result with numbers]

Contoh transformasi: | Sebelum | Sesudah | |———|———| | “Mem-
buat website company profile” | “Built company profile website using
React and Tailwind CSS, resulting in 40% increase in online inquiries”
| | “Mengelola database” | “Managed PostgreSQL database with 10+
tables, serving 500+ daily transactions with 99.9% uptime” |

Kriteria: Minimal 9 bullet (3 per role), setiap bullet ada angka/impact.

Latihan 3: Buat CV ATS-Friendly

Gunakan template ATS-friendly dari section 3.2. Isi dengan data diri:

1. Professional Summary (2-3 kalimat)
2. Experience (minimal 1 role, 3 bullets per role)
3. Education
4. Projects (minimal 2)
5. Skills (kategorikan: Languages, Frameworks, Tools)
6. Certifications (jika ada)

Export sebagai PDF. Cek menggunakan resumeworded.com atau tools serupa.

Kriteria: Single column, no images/icons, 1 page, PDF format, ATS score minimal 70.

Latihan 4: Personal Branding Statement + All-Star Profile

1. Tulis **personal branding statement** menggunakan formula: I help [target] [outcome] through [method].
2. Tulis ulang **LinkedIn headline** berdasarkan statement tersebut
3. Apply **LinkedIn profile checklist** (section 3.4) — pastikan semua centang terpenuhi

4. Kirim **personalized connection request** ke 5 orang di bidang yang sama

Kriteria: Personal branding statement jelas dan spesifik (bukan generik), LinkedIn profile minimal level “Intermediate” atau “All-Star”, connection request tidak copy-paste massal.

Sesi 4: Tech Community & Open Source

Tulis artikel teknis, berkontribusi ke open source, dan bangun jaringan di komunitas tech.

Durasi: 4 jam | **Output:** Artikel blog + PR open source

4.1 Technical Blogging

Blog teknis membangun authority dan personal branding. Tiga platform utama:

Platform Blog

Platform	Kelebihan	Kekurangan	Target Audience
Dev.to	Komunitas developer besar, sudah ada pembaca, SEO bagus	Kurang kontrol kustomisasi	Developer global
Hashnode	Own domain, built-in newsletter, modern UI	Komunitas lebih kecil dari Dev.to	Tech founders, builders
Medium	Trafik tinggi, monetisasi partner program	Tidak bisa custom domain gratis, kurang “tech vibe”	General tech audience

Cara Mulai Blog di Dev.to

1. Buka dev.to → Sign up with GitHub
2. Klik profil → **Create Post**

3. Tulis artikel menggunakan Markdown
4. Tambahkan tag (maks 4, misal: react, typescript, tutorial, webdev)
5. Set **Canonical URL** jika blog juga di posting di tempat lain
6. Klik **Publish** atau **Save as draft**

Cara Mulai Blog di Hashnode

1. Buka hashnode.com → Sign up
 2. Buat blog: pilih nama, URL, dan tema
 3. Mulai nulis di dashboard → **New Story**
 4. Opsional: hubungkan custom domain (misal: blog.namakamu.com)
-

4.2 Menulis Artikel Teknis

Struktur Artikel Efektif

□ Struktur Artikel Teknis yang Engaging

1. JUDUL
 - Formula: [Angka] + [Adjective] + [Keyword] + [Promise]
 - Contoh: "10 React Hooks yang Wajib dikuasai Developer 2026"
 - Contoh: "How I Reduced Build Time by 60% with Vite Migration"
2. COVER IMAGE
 - Buat cover sederhana pakai Canva / Figma
 - Ukuran standar: 1200×628px
3. INTRO (Hook)
 - Problem: apa yang reader alami
 - Empathy: "Saya juga pernah ngalamin ini..."
 - Solution: apa yang akan mereka dapatkan setelah baca
4. PRASYARAT
 - Skill/ tools yang reader harus punya
 - Link ke artikel terkait jika ada
5. TUTORIAL / PEMBAHASAN UTAMA
 - Step-by-step jelas
 - Tiap step: why → how → code
 - Gunakan code blocks dengan syntax highlighting
6. CODE SNIPPET

```
```javascript
```

```
// Always explain what the code does BEFORE showing it
const handleSubmit = async (data) => {
 const result = await api.post('/users', data);
 return result;
};
```

#### 7. HASIL / DEMO

- Screenshot GIF atau link ke live demo
- Metrics: “Build time turun dari 45s ke 18s”

#### 8. KESIMPULAN

- Ringkasan 3 poin utama
- Call to action: “Coba sendiri dan share hasil kamu!”
- Link ke repo/ social media

#### 9. REFERENSI

- Official docs
- Artikel terkait
- Tools yang dipakai ““

### Template Artikel Dev.to (Markdown)

*title: How I Built a Real-time Chat App with React and WebSocket*

*published: true*

*description: Step-by-step tutorial membangun real-time chat app menggunakan React*

*tags: react, websocket, tutorial, node*

*cover\_image: https://images.pexels.com/photos/1181263/pexels-photo-1181263.jpeg*

*series: Build with Me*

*canonical\_url: https://blog.namakamu.com/react-websocket-chat*

---

## ## Introduction

Pernah coba bikin real-time chat app tapi bingung mulai dari mana?  
Atau coba WebSocket tapi dapet error yang gak jelas?

Di tutorial ini, saya akan menunjukkan step-by-step cara build chat app real-time menggunakan React di frontend dan Node.js + WebSocket di backend.

## ## Prerequisites

- Basic React knowledge
- Node.js installed
- Postman (optional for testing)

## ## Step 1: Setup WebSocket Server

Pertama kita setup WebSocket server di Node.js:

```
``javascript
const WebSocket = require('ws');
const server = new WebSocket.Server({ port: 8080 });

server.on('connection', (socket) => {
 console.log('Client connected');

 socket.on('message', (message) => {
 // Broadcast to all clients
 server.clients.forEach((client) => {
 if (client.readyState === WebSocket.OPEN) {
 client.send(message.toString());
 }
 });
 });
});

socket.on('close', () => {
 console.log('Client disconnected');
});
});
```

## Step 2: Setup React Client

Buat React app dan install dependencies:

```
npx create-react-app chat-app
cd chat-app
npm install
```

Komponen WebSocket client:

```
import React, { useState, useEffect, useRef } from 'react';

function ChatRoom() {
 const [messages, setMessages] = useState([]);
 const [input, setInput] = useState('');
 const ws = useRef(null);

 useEffect(() => {
 ws.current = new WebSocket('ws://localhost:8080');

 ws.current.onmessage = (event) => {
 setMessages(prev => [...prev, event.data]);
 };
 });
}
```

```

 return () => ws.current.close();
 }, []);

 const sendMessage = () => {
 if (input.trim()) {
 ws.current.send(input);
 setInput('');
 }
 };

 return (
 <div>
 <div className="messages">
 {messages.map((msg, i) => (
 <div key={i} className="message">{msg}</div>
))}
 </div>
 <input value={input} onChange={e => setInput(e.target.value)} />
 <button onClick={sendMessage}>Send</button>
 </div>
);
}

```

### Step 3: Run and Test

*# Terminal 1: server*

node server.js

*# Terminal 2: client*

npm start

Buka dua browser window — message terkirim real-time.

### Result

- ☐ Real-time bidirectional communication
- ☐ Handles multiple clients
- ☐ Clean disconnect handling

### Conclusion

WebSocket gak serumit yang dikira! Dengan ~30 baris code di back-end dan komponen React sederhana, kamu punya real-time chat app.

Coba sendiri dan kustomisasi sesuai kebutuhan!

**Next steps:** Add user authentication, message persistence with database, dan deploy ke production.

### ### Tips Menulis yang Engagement Tinggi

- **Hook di 3 detik pertama** – paragraf pertama harus menarik
- **Format scannable** – heading, bullet, bold untuk poin penting
- **Screenshot GIF** – lebih baik dari gambar statis (pakai Kapwing / OBS)
- **Code blocks dengan syntax highlight** – tambahkan bahasa di belakang ``
- **CTA di akhir** – minta komentar, share, atau feedback
- **Posting rutin** – minimal 1 artikel per bulan
- **Engage di komentar** – balas setiap komentar di artikel kamu

---

### ## 4.3 Open Source Contribution

Berkontribusi ke open source meningkatkan skill, portfolio, dan jaringan.

#### ### Menemukan Issue untuk Pemula

**Resources:**

Platform	Link	Tips
Good First Issues	[goodfirstissue.dev](https://goodfirstissue.dev/)	Langsung
Up For Grabs	[up-for-grabs.net](https://up-for-grabs.net/)	Filter by tech stack
First Timers Only	[firsttimersonly.com](https://www.firsttimersonly.com/)	Khusus timer
GitHub Explore	[github.com/explore](https://github.com/explore)	Cari repo populer
Label: `good first issue`	GitHub issues filter	Cari label di repo manapun

**Cara filter issue di GitHub:**

1. Buka repo → **Issues** tab
2. Klik **Labels** dropdown
3. Pilih: `good first issue`, `help wanted`, `beginner friendly`, `easy`
4. Klik label untuk filter

#### ### Workflow Kontribusi

## WORKFLOW KONTRIBUSI OPEN SOURCE

1. FORK REPO Klik Fork di GitHub → salin repo ke akun kamu
2. CLONE REPO KAMU `git clone https://github.com/username/repo.git`  
`cd repo`
3. ADD UPSTREAM `git remote add upstream https://github.com/original/repo.git`  
`git fetch upstream`
4. BUAT BRANCH BARU `git checkout -b fix/typo-readme #` atau `git checkout -b feat/add-dark-mode`
5. KERJAKAN PERUBAHAN # Edit file sesuai issue `git add .` `git commit -m "fix: perbaiki typo di README section 2"`
6. SYNC DENGAN UPSTREAM `git pull upstream main -rebase #` Resolve conflict jika ada
7. PUSH KE FORK `git push origin fix/typo-readme`
8. BUKA PULL REQUEST GitHub → klik "Compare & pull request"
  - title jelas: "fix: correct typo in README section 2"
  - description: jelaskan apa yang diubah dan kenapa
  - referensi issue: "Closes #123"
9. TUNGGU REVIEW
  - Maintainer mungkin minta revisi
  - Diskusi profesional
  - Push perubahan di branch yang sama
10. MERGED! ☐

## ### Git Commit Message Convention

Gunakan [Conventional Commits](<https://www.conventionalcommits.org/>):

Prefix	Kegunaan	Contoh
<code>`feat:`</code>	Fitur baru	<code>`feat: add dark mode toggle`</code>
<code>`fix:`</code>	Bug fix	<code>`fix: correct date format in header`</code>
<code>`docs:`</code>	Dokumentasi	<code>`docs: update README installation guide`</code>
<code>`style:`</code>	Formatting	<code>`style: run prettier on all files`</code>
<code>`refactor:`</code>	Refactor code	<code>`refactor: extract API client to separate module`</code>
<code>`test:`</code>	Test	<code>`test: add unit tests for User model`</code>
<code>`chore:`</code>	Maintenance	<code>`chore: update dependencies`</code>

## ### Etika Berkontribusi

- □ Baca CONTRIBUTING.md sebelum mulai
- □ Cari issue yang sudah ada – jangan duplikat
- □ Tanya dulu di issue kalau ragu
- □ Gunakan bahasa yang sopan dan profesional
- □ Hormati keputusan maintainer
- □ Jangan bikin PR besar tanpa diskusi dulu
- □ Jangan spam PR typo di 50 repo sekaligus
- □ Jangan marah kalau PR ditolak atau butuh revisi

---

## ## 4.4 Networking di Komunitas Tech

### ### X / Twitter

#### **\*\*Strategi:\*\***

- **\*\*Buat bio yang jelas:\*\*** `Frontend Developer | React | Writing about web dev & career`
- **\*\*Follow akun tech:\*\*** @freeCodeCamp, @reactjs, @typescript, @vercel
- **\*\*Tweet konten orisinal:\*\*** tips, thread tutorial, pengalaman belajar
- **\*\*Gunakan thread\*\*** untuk konten panjang – lebih engagement dari single tweet
- **\*\*Engage:\*\*** reply, retweet dengan komentar, share artikel orang lain
- **\*\*Gunakan hashtag relevan:\*\*** `#webdev`, `#reactjs`, `#100DaysOfCode`, `#opensource`

#### **\*\*Contoh tweet teknis:\*\***

□ Thread: Cara saya belajar React dalam 30 hari (dari 0 jadi bisa bikin production app)

Hari 1-3: JS fundamentals (ES6+, promises, async/await) Hari 4-7: React basics (JSX, components, props) Hari 8-12: State & hooks (useState, useEffect, useContext) ...

Setiap hari: build 1 mini project. Total 30 mini projects. Thread ini menyelamatkan karir saya. Share biar bermanfaat! □□ ""

## **Discord**

### • **Server recommendation:**

- [Reactiflux](#) — React community
- [Dev.to Discord](#)
- [freeCodeCamp](#)
- Server Indonesian tech: **Python Indonesia, JS.id, Kotlin ID**

### • **Etika:**

- Baca #rules dan #faq dulu
- Gunakan channel yang tepat

- Tanya dengan spesifik: “code, error message, what you tried”
- Jawab pertanyaan orang lain kalau bisa
- Jangan DM tanpa izin

## Meetup / Event

### Platform cari event:

Platform	Link	Tips
Meetup.com	<a href="https://www.meetup.com">meetup.com</a>	Cari “tech” + kota kamu
Eventbrite	<a href="https://www.eventbrite.com">eventbrite.com</a>	Tech talks & workshops
Luma	<a href="https://lu.ma">lu.ma</a>	Startup events
Discord lokal	Server tech Indonesia	Banyak event online

**Tips menghadiri meetup:** - Bawa notebook dan kartu nama (atau QR LinkedIn) - Target per event: kenalan minimal 3 orang baru - Follow up di LinkedIn dalam 24 jam - Tanya 1 pertanyaan di Q&A - Volunteer jadi pembicara untuk level berikutnya

## Latihan

### Latihan 1: Tulis Artikel Teknis

Buat artikel teknis di Dev.to / Hashnode / Medium dengan:

- **Topik:** Bebas (pilih yang kamu kuasai)
- **Format:** Problem → Solution → Code → Result
- **Panjang:** Minimal 500 kata
- **Sertakan:** Cover image, code blocks, screenshot/GIF, CTA di akhir
- **Tag:** 3-4 tag relevan

**Kriteria:** Artikel terpublish, punya minimal 1 gambar, code blocks dengan syntax highlight, dan link repo.

### Latihan 2: Kontribusi Open Source (Dokumentasi)

Cari open source project dengan label good first issue atau documentation.

1. Pilih issue dokumentasi (misal: typo, translasi, README update)
2. Fork repo
3. Buat branch: docs/fix-[deskripsi]
4. Commit perubahan
5. Buka Pull Request dengan deskripsi jelas

**Kriteria:** PR terkirim, referencing issue yang dikerjakan, menggunakan conventional commit, sudah follow CONTRIBUTING.md jika ada.

### Latihan 3: Bangun X/Twitter Presence

Dalam seminggu:

1. **Optimasi bio** X/Twitter — jelas, menyebut role + interest
2. **Tweet 3 thread/tips** teknis (bisa tentang coding, tools, atau career)
3. **Reply/quote** 5 tweet dari developer lain dengan komentar bermakna
4. **Follow** 10 akun tech relevant
5. **Share artikel** yang sudah ditulis di Latihan 1

**Kriteria:** Bio terisi, minimal 3 original post, ada interaksi dengan akun lain.

### Latihan 4: Join & Engage di Komunitas

1. Join **minimal 2 Discord server** tech (bisa Reactiflux, Python ID, JS.id, dll)
2. Di setiap server:
  - Perkenalkan diri di #introductions
  - Bantu jawab 1 pertanyaan orang lain
  - Tanya 1 pertanyaan yang kamu masih bingung
3. Cari **1 meetup/event** tech (online atau offline) di bulan ini
4. Daftar dan tandai di kalender

**Kriteria:** Screenshot/ link ke intro post di Discord, minimal 1 pertanyaan terjawab atau diajukan, sudah terdaftar di event.
